Requesting a Medical Lab Test Through Wareed System

1. It begins with a patient consulting with their physician.

2. The physician examines the patient and requests a medical test through Wareed if required.

3. A nurse is notified and proceeds to collect the patient's test samples whilst recording the procedure in Wareed.

4. The patient's test sample is logged in to Wareed.

5. Wareed verifies and re-records the results. The lab team perform tests and enter the patient's results in to Wareed.

6. The physician can then access the results through Wareed & can prescribe additional treatments, medication and tests, if needed.
